Research Overview

I work on **practical formal methods for the design and control of autonomous systems**, guaranteeing correctness with respect to formal specifications. I focus on safety-critical applications involving cyber-physical systems performing complex tasks in adversarial environments, interacting with a variety of agents. My work combines technical and creative perspectives from formal methods for software verification, hybrid systems, robotics, control and game theory.

Professional Experience

Zoox, Inc. October 2016-present

Position: Research Engineer

Leading algorithm design and software engineering of planning and control capabilities for self-driving vehicles. Working with product management and control engineering teams to ensure cross-functional coordination and aligned priorities.

United Technologies Research Center August 2015-August 2016

Position: Senior Scientist

Applied planning and formal verification methods to United Technologies' extensive product portfolio. Projects across all business units, with a focus on decentralized intelligence, privacy and security for cyber-physical systems.

California Institute of Technology August 2013-July 2015

Position: Postdoctoral Scholar

Affiliation: The TerraSwarm Research Center

Advisors: Richard Murray and Sanjit Seshia

Education

Cornell University, Ithaca, NY 2007 - 2013

PhD, Computer Science

Advisor: Hadas Kress-Gazit

Graduate Minor: Economics

Wellesley College, Wellesley, MA 2003 - 2007

B.A. magna cum laude

Majors: Computer Science and Mathematics

University of Edinburgh, Scotland, UK Spring 2006

Visiting student at the School of Informatics

Mahindra United World College of India, Pune, India 2001 - 2003

International Baccalaureate Diploma

Awards and Honors

NSF EAGER Award for Collaborative Research (2016)

Co-PI on a \$200,000 grant on *Socially Responsible Smart Cities: algorithms for smarter delivery of community services through population sensing and urban technology*. Ongoing collaboration with Yasser Shoukry (UCLA) & Min Kyung Lee (CMU) .

Invited to attend the **Second Heidelberg Laureate Forum** (2014)

The Heidelberg Laureate Forum brings together winners of the Fields Medal, Abel Prize, Turing Award, and Rolf Nevanlinna Prize with young researchers for a mix of formal lectures and informal interactions. Selected as one of 200 from an application pool of approximately 2000. Includes a travel award to attend the Forum.

Outstanding TA Award, Cornell Department of Computer Science (2008-09)

Certificate of achievement for outstanding contributions as a Teaching Assistant.

Cornell Fellowship, Cornell University Graduate School (2007-08)

Merit-based fellowship awarded to first-year PhD students.

Phi Beta Kappa (awarded March 2007)

Sigma Xi (awarded May 2007)

Wellesley College Computer Science Department Honors

Honors Thesis: “Learning Primitive Predicates for Probabilistic Planning”

Advisors: Ellen Hildreth (Wellesley), Leslie Kaelbling (MIT)

Jerome A. Schiff Honors Thesis Fellowship (2006-2007)

Competitive award for senior honors thesis.

Key Projects

Scalable Task & Motion Planning with Temporal Logic Specifications 2017-Present
Collaborators: Chris Paxton (Zoox), Cristian Vasile (MIT)
Aim: Lightweight methods for baking properties into system behavior have shown promise for scaling correct-by-construction synthesis beyond illustrative examples and to real-world domains. We have been developing methods for enforcing temporal logic specifications on the outputs of state-of-the-art search-based and sampling-based robotic task and motion planning. These methods are effective at imposing constraints and costs that are automatically generated from logical specifications.

The First Challenge on Formal Methods for Robotics 2014-Present
Collaborators: Scott C. Livingston (Caltech)
Aim: Compared to other areas within robotics research, demonstrations of formal methods have been surprisingly small-scale. This challenge, the first edition of which was held at the IEEE International Conference on Robotics and Automation (ICRA) in May 2016, seeks to motivate advancement of the state of the art toward practical realization. Details and code are available on the challenge website at <http://www.fmrchallenge.org/>.

Provably Correct Control for Robot Teams 2013-Present
Collaborators: Hadas Kress-Gazit (Cornell), Nora Ayanian (USC)
Aim: Synthesis of centralized and decentralized controllers that guarantee safe execution and goal fulfillment for complex tasks involving teams of robots.

Model Predictive Control Synthesis from Timed Logics 2013-Present
Collaborators: Richard M. Murray (Caltech), Sanjit Seshia (UC, Berkeley)

Aim: A framework for posing model-predictive control tasks as synthesis from signal temporal logic specifications. Motivating case studies include smart building-level (“micro-grid”) power systems with controllable loads and generators, and desired timed properties such as the maximum period of power loss during failures or outages.

Timing Semantics for High-Level Robot Control 2011-2013

Advisor: Hadas Kress-Gazit (Cornell University)

Aim: Automatically constructing robot hybrid controllers that guarantee safe execution and goal fulfillment for tasks involving low-level controllers of varying execution times.

Explaining Unsynthesizable Specifications For High-Level Robot Behaviors 2010-2013

Advisor: Hadas Kress-Gazit (Cornell University)

Aim: Finding suitable explanations of unsynthesizable LTL specifications for robot control by exploiting the structure of the control tasks and combining existing and novel techniques from formal methods.

Computational Models of Games With Time Pressure 2009-2010

Advisors: Joseph Halpern, Rafael Pass, Bart Selman (Cornell University)

Aim: Formalizing a computational model to capture game-theoretic properties of time pressure in games such as speed chess and deadline-based negotiations.

Epistemic Characterization of Cryptographic Concepts In Modal Logic 2008-2009

Advisors: Joseph Halpern, Rafael Pass (Cornell University)

Aim: Providing an extended modal logic syntax and semantics for describing a range of cryptographic properties.

Learning Primitive Predicates for Probabilistic Planning 2006-2007

Advisors: Leslie Kaelbling (MIT), Ellen Hildreth (Wellesley College)

Aim: Creating a bootstrapping framework for probabilistic planning using supervised learning of task-specific primitive predicates.

Software

BluSTL

github.com/BluSTL/BluSTL

MATLAB toolkit for automatically generating hybrid controllers from specifications written in Signal Temporal Logic.

Linear Temporal Logic MissiOn Planner (LTLMoP)

ltmlop.github.io/

Modular Python toolkit for designing, testing, and implementing hybrid controllers generated automatically from task specifications written in Structured English, Temporal Logic or a subset of Natural Language.

Small But Complete GROne Synthesizer

github.com/VerifiableRobotics/slugs

C++ stand-alone reactive synthesis tool for generalized reactivity(1) synthesis.

The Temporal Logic Planning Toolbox (TuLiP)

tulip-control.sourceforge.net/

Python code for automatic synthesis of correct-by-construction embedded control software.

**Teaching and
Advising
Experience**

Lecturer at the NSF ExCAPE Summer School on Software Synthesis June 2015

MIT, Cambridge, MA

Planned and instructed a two-part tutorial on *synthesis for robotics*, including a hands-on exercise with using state-of-the-art synthesis tools like LTLMoP and BluSTL.

Instructor for ME/CS 132: Advanced Robotics

Spring 2015

California Institute of Technology, Pasadena, CA

Planned and instructed an advanced undergraduate course on robot motion planning. This was a project-based course including a laboratory component.

Undergraduate and Graduate Project Advising 2013-Present
Caltech (C) and UC Berkeley (B)

Guided students in design and implementation of the following independent research projects:

- Abishek Akella, Aldrich Ong, John Song (B) (*MPC-on-chip with temporal specifications*)
- Dexter Scobee, Omid Bagherieh (B) (*MPC primitives for compositional synthesis from temporal logic specifications*)
- Yuening Zhang (C) (*contract-based design of autonomous robotic taxi systems*)
Yuening is now a PhD student in EECS at MIT.
- Mattias Fält (C) (*efficient receding horizon control from temporal logic specifications*)
Mattias is now a PhD student in Automatic Control at Lund University. This project has resulted in two conference publications to date.
- Joon Sik (David) Kim (C) (*environment assumptions for temporal logic control*)
- Jean-Maurice Leonetti (C) (*constructing discrete abstractions for robot motion planning*)
- Benjamin Wu (C) (*formal verification of building access control systems*)

CURIE Academy Teaching Assistant July 2012
Cornell University, Ithaca, NY
Supervised lab-work and provided teaching support for a week long robotics summer school for high school girls.

Undergraduate Independent Study Advisor (Advisee: Brian Finn) Fall 2011
Cornell University Autonomous Systems Lab, Ithaca, NY
Planned and supervised a for-credit undergraduate research project on interfacing SAT solvers with the JTLV temporal logic synthesis tool in order to identify unsatisfiable cores of robot mission specifications.

Teaching Assistant for Decision Theory Fall 2010
Cornell University Department of Computer Science, Ithaca, NY
Graded coursework, held office hours, and provided course feedback to the instructor.
Course Instructor: Joe Halpern.

Head TA, Object-Oriented Programming and Data Structures Spring 2009
Cornell University Department of Computer Science, Ithaca, NY
Delegated and monitored grading, consulting and teaching responsibilities to a staff of 30 TAs. Graded coursework, taught a weekly section, and guest-lectured on special topics. Received outstanding TA award. Course Instructor: Graeme Bailey.

Computer Science Advanced Standing Placement Examiner Fall 2009, 2010, 2012
Cornell University Department of Computer Science, Ithaca, NY
Department-administered exam to determine incoming freshman credits for CS1110 (Introduction to Computing). Graded placement exams, assessed student knowledge, and decided which students would be awarded credit.

Computer Science and Mathematics Tutor 2004-2007
Wellesley College, Wellesley, MA
Held regular group and individual tutoring sessions for a range of CS and math courses.

Cornell CSGO-ACSU Mentoring Program (August 2010-May 2011)

Teaching Volunteer at MacCormick Secure Center

June-August 2011

MacCormick is a maximum-security correctional facility for young men aged 16-21 who have committed violent crimes. Taught a communication skills summer course; topics covered included thought organization and job interview preparation. Ran weekly sessions with small class sizes and one-on-one instruction, working primarily with inmates close to being released.

Computer Science Graduate Organization (CSGO)

2009 - 2011

Founding Member and Social Chair, coordinating department-wide social events.

Expanding Your Horizons

2007 - 2013

EYH is a one-day conference for 7th-9th grade girls that comprises hands-on workshops and demonstrations by Cornell students and faculty. The conference aims to stimulate the girls' interest in math and science, provide them with female scientist role models, and introduce them to career opportunities in math and science.

Fundraising Chair (2012-13): Raised over \$25,000 each year to fund EYH at Cornell.

Lansing Correctional Center Outreach Chair (2011-12): Organized and supervised an EYH mini-conference at the Lansing Correctional Center for Girls in Lansing, NY. Responsibilities included soliciting student-run workshops, negotiating logistics with correctional center staff, and keeping workshop leaders aware of and compliant with the center's policies.

Diversity Chair (2009-10): Increased participation from rural and inner city schools by 20 or more students each year.

Workshop Coordinator (2008-2012): Organized several workshops introducing the girls to various topics in CS, including introductory graph theory and programming using Scratch.
